

# BMW project "PID-Recovery"

## In-field PID forecast

Regeneration of PV power plants suffering from Potential Induced Degradation (PID) and yield forecasting

■ Partners: Fraunhofer IWES, PADCON, Freiberg Instruments, DiSUN

■ Period: 01/2018 to 12/2020

### ■ Targets:

- Forecast of PID regeneration dynamics by means of the novel in-field PID test
- Module test standard under recognition of PID regeneration
- Cost effectiveness of PID countermeasures by means of yield prognoses
